REPRESENTING

ACROSS EUROPE

Do you use **bobbins**?

Fed up with **delays** in supply?

Unhappy with the **cost** of a "one off"?

Want to make your own **prototypes**?

Need **air coils** to your own design?

Want to wind wire from **0.02 mm to 3 mm**?

One machine can do it all – the

WH-751

For winding heavy wire (up to 3mm diameter) all you need is a **WH-751**; its brushless DC motor is geared to provide all the torque you need at up to 400 rpm. It comes complete with a tension device that's built to last, so it's a great standalone machine for heavy winding. For higher speed with finer wires, you can select the 1600 rpm range, with your choice of tensioner and feeder head.

For spot-on control of heavy winding

just add a **tailstock**, to support the end of large or heavy bobbins, or special tooling.

A manual tailstock from IWM.

Or you can install the pneumatic version

You can wind smaller wire on the same machine! Fit a **guide tube feeder head** (800i style) for precise control of wire down to 0.02 mm, or a **multi-wire feeder head** (800 style) to allow **margin taping** as well. Choose a **tensioner** (type 'A', type 'B', or the A-09) A new option to this machine is the **variable speed foot switch**.

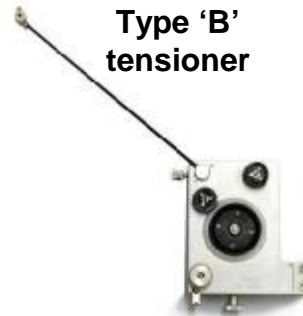

800 style Feeder head

800(i) style Feeder head

Type 'B' tensioner

Variable speed foot switch

Air coils can be made on bench-top machines! We offer a **tooling design service** that can have you winding your prototypes within 14 days of our receipt of your specifications. You'll need to add an **alcohol bath** or a **hot air gun** to your WH-751, tailstock and suitable wire feeding set.

Many people would like to wind their own coils but can't justify the cost of the range of machines they would need. The **WH-751** is so versatile that it does everything except sweep the floor – **THE WH-751, A range of machines in itself**

We aim to be much more than a machinery supplier. Our team has a vast range of winding experience and is able to offer help and advice on all aspects of coil winding, from tooling design to machine choice and set-up.

Ingrid West Machinery
